

Q1
cont

a housing;
a lens located in the wall of the housing;
a source of illumination located within the housing and positioned to project a beam of light through the lens to illuminate an area surrounding the device with sufficient candlepower to enable a user to view the area; and
a power source for the source of illumination in electrical communication with the source of illumination.

In addition, please add the following new claims:

Q2

19. (New) The communications device of claim 1 wherein the source of illumination is capable of generating from 0.1 to 30 lumens.

20. (New) The communications device of claim 8 wherein the source of illumination is capable of generating from 0.1 to 30 lumens.

Q3

21. (New) A communications device comprising;
a housing;
telecommunication circuitry located in the wall of the housing;
an integrated flashlight; and
a power source for the flashlight in electrical communication with the flashlight.

22. (New) The communications device of claim 21 further comprising a switch in electrical communication with the power source of the source of illumination.

23. (New) The communications device of claim 21 wherein the source of illumination is an incandescent light bulb.
